REQUESTED ACTION

Authorize the Department of Environmental Services (NHDES) to amend an American Rescue Plan Act (ARPA) grant agreement (PO # 1089959) with the City of Rochester, NH, (VC # 177467-B002), by extending the end date to December 31, 2024 from April 30, 2024, effective upon Governor and Council approval. The original agreement was approved by Governor & Council on November 22, 2022, Item #125. This is a no-cost time extension. 100% Federal Funds.

EXPLANATION

NHDES is requesting approval of a no-cost time extension amendment to a grant agreement with the City of Rochester to allow additional time to complete the final design, sediment managing planning, and permitting for the removal of the Gonic and Gonic Sawmill Dams. This extension is requested because of delays in key deliverables due to town staffing vacancies which delayed the project construction.

Both the Gonic Dam and the Gonic Sawmill Dam are structurally deficient and no longer serve their intended design purpose. The Gonic Dam is categorized as a significant hazard and is one of seven priority dams in the NH Nonpoint Source Management Plan and ranks high for watershed recovery potential. The Gonic Sawmill Dam is 1,000 feet downstream of the Gonic Dam and has approximately 4,000 cubic yards of contaminated sediment in its impoundment. A sudden release of this sediment could have detrimental impacts on downstream ecology and water users. Removal of these dams would eliminate this risk and would restore 12.8 miles of free-flowing river, leading to improved water quality, natural sediment transport/nutrient flow, and habitat connectivity. Both dams also have inadequate spillway capacity to safely pass flood flows, resulting in excess water being held back by the dams and thus creating a risk for failure. Dam removal will be designed to restore natural flow regimes to increase resilience to extreme weather events and flooding. The funds will be used for preparation of final designs, a sediment management plan, permitting, and Historic Preservation Act compliance documents necessary to support the removal of these dams. The City of Rochester will use the extra time to complete the designs, planning, and permitting. This is an allowable use of ARPA funds under Section 602 (c)(1)(D) to make necessary investments in water, sewer, or broadband infrastructure.

ARPA of 2021 is a \$1.9 trillion economic stimulus bill passed by the 117th United States Congress and signed into law by President Biden on March 11, 2021, to speed up the United States' recovery from the economic health effects of the COVID-19 pandemic and the resultant recession. and local funding, including responding to public health emergencies, responding to workers performing essential work during the COVID-19 emergency, providing revenue relief to states and making investments in water, sewer, and broadband infrastructure.

To date, \$37,621.47 has been spent of the original \$150,000 federal grant award. This amendment has been approved by the Office of the Attorney General as to form, execution, and content.

We respectfully request your approval.

REQUESTED ACTION

Authorize the Department of Environmental Services (NHDES) to enter into a grant agreement with the City of Rochester, NH (VC #177467-B002) for a total of \$150,000 for final design, sediment management planning, and permitting necessary to remove two dams on the Cocheco River, effective upon Governor and Council approval through April 30, 2024. 100% Federal Funds.

EXPLANATION

NHDES released a solicitation for Critical Flood Risk Infrastructure Grant (CFRING) applications on February 15, 2022. Projects eligible to receive CFRING funding included flood resilience and stormwater management planning and assessment projects, as well as implementation projects. NHDES received 33 eligible proposals and ranked them according to selection criteria and selection committee discussion. Eight proposals were selected to receive American Rescue Plan Act (ARPA) funding, including the proposal submitted by the City of Rochester for final design, sediment management planning, and permitting necessary to remove the Gonic Dam and Gonic Sawmill Dam on the Cocheco River. A scoring matrix that includes a list of the staff who participated in proposal review, along with their titles and level of experience is provided in Attachment B.

Both the Gonic Dam and the Gonic Sawmill Dam are structurally deficient and no longer serve their intended design purpose. The Gonic Dam is categorized as a significant hazard and is one of seven priority dams in the NH Nonpoint Source Management Plan and ranks high for watershed recovery potential. The Gonic Sawmill Dam is 1,000 feet downstream of the Gonic Dam and has approximately 4,000 cubic yards of contaminated sediment in its impoundment. A sudden release of this sediment could have detrimental impacts on downstream ecology and water users. Removal of these dams would eliminate this risk and would restore 12.8 miles of free-flowing river, leading to improved water quality, natural sediment transport/nutrient flow, and habitat connectivity. Both dams also have inadequate spillway capacity to safely pass flood flows, resulting in excess water being held back by the dams and thus creating a risk for failure. Dam removal will be designed to

restore natural flow regimes to increase resilience to extreme weather events and flooding. This agreement will result in the preparation of final designs, a sediment management plan, permitting, and Historic Preservation Act compliance documents necessary to support the removal of these dams. This is an allowable use of ARPA funds under Section 602 (c)(1)(D) to make necessary investments in water, sewer, or broadband infrastructure.

ARPA of 2021 is a \$1.9 trillion economic stimulus bill passed by the 117th United States Congress and signed into law by President Biden on March 11, 2021, to speed up the United States' recovery from the economic health effects of the COVID-19 pandemic and the resultant recession. The Act defines eligible uses of the state and local funding, including responding to public health emergencies, responding to workers performing essential work during the COVID-19 emergency, providing revenue relief to states and making investments in water, sewer, and broadband infrastructure.

Total project costs for this agreement are \$150,000. NHDES will provide 100% of project costs through a federal grant. A budget breakdown is provided in Attachment A. In the event federal funds become no longer available, general funds will not be requested to support the project.

This agreement has been approved by the Office of the Attorney General as to form, execution, and content.

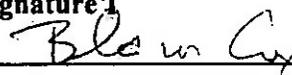

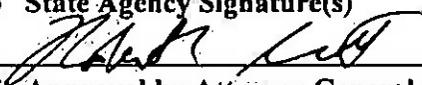

We respectfully request your approval.

Deliverables: Summary memo of sediment analysis.

Budget Estimate: \$10,500

Task 3: Draft Sediment Management Plan

Update existing Draft Sediment Management Plan (DSMP) based on recently completed sediment sampling and bathymetric mapping. The revised DSMP will establish a management strategy for the removal, stabilization, and/or passive release of impounded sediments at the dams. The DSMP should consider construction sequencing and methods for water management during the removal process as it relates to minimizing downstream transport of contaminated sediments. The revised draft will be provided to NHDES for review and comment.

Timeframe: December 1, 2022 – February 28, 2023
