REQUESTED ACTION

Authorize the New Hampshire Department of Environmental Services (NHDES) to **RETROACTIVELY** amend an agreement (PO # 1090409) with Exeter Public Works, Exeter, NH, (VC #177386-B001) for the *Squamscott River, Water Integration for Squamscott-Exeter (WISE) Integrated Plan: Subsurface Infiltration and Media Filtration in the Lincoln Street Subwatershed, Exeter, New Hampshire* project by extending the project expiration date to December 31, 2024, from December 31, 2023, effective upon Governor and Council approval. The original agreement was approved by Governor and Council on April 20, 2022, Item #82. No additional funding is requested in this amendment. This is a no-cost time extension.

EXPLANATION

NHDES requests **RETROACTIVE** approval of a no-cost time extension amendment to a grant agreement with the Exeter Public Works to complete the *Squamscott River, Water Integration for Squamscott-Exeter (WISE) Integrated Plan: Subsurface Infiltration and Media Filtration in the Lincoln Street Subwatershed, Exeter, New Hampshire* project. This amendment is retroactive because approval of the extension of the grant funding from the United States Environmental Protection Agency (EPA) Section 319 Grant was required prior to Governor and Council approval of the amendment. Delays in obtaining the grant extension approval from EPA delayed processing the amendment request before the December 31, 2023 agreement expiration date.

The Great Bay watershed has experienced population growth and an increase in development which threatens the water quality and health of Great Bay. Impervious cover, landscaping, and altered hydrology, have increased nonpoint source pollution in runoff discharged to Great Bay from developed land. The Exeter-Squamscott River is a major tributary to Great Bay. The Town of Exeter is installing structural best management practices (BMPs) to mitigate nonpoint source pollution within the Great Bay watershed. Additional time to complete this project is needed due to unforeseen physical constraints that were encountered at the BMP construction site. These challenges resulted in a need to adjust the design, associated bid documents, and project timeline.

To date, \$35,000 has been spent of the original \$118,900 grant award.

His Excellency, Governor Christopher T. Sununu
and the Honorable Council

In the event that federal funds become no longer available, General funds will not be requested to support this program. The amendment has been approved by the Office of the Attorney General as to form, execution, and content.

We respectfully request your approval.

EXPLANATION

NHDES issued a Request for Proposals (RFP) for the 2021 Watershed Assistance Grants program. The ten proposals received were ranked based on the criteria included in the RFP: water quality improvement or protection; cost/benefit ratio; local capacity to complete the project; relative value or significance of the water body; and general quality and thoroughness of the proposal. Based on the results of the selection process and available federal grant funding levels, eight implementation projects were selected to receive funding. Please see Attachment B for a list of project rankings and NHDES review team members.

Watershed Assistance Grants focus on the reduction of nonpoint source (NPS) pollution. NPS pollution occurs when rainfall, snowmelt, or irrigation waters travel through the ground or across land, transporting materials that are then introduced into groundwater or deposited into rivers, lakes, and coastal waters. Pollutants can include chemicals, sediments, nutrients, and toxins that often have harmful effects on drinking water supplies, recreation, fisheries, and wildlife. Land development or changes in land use can also cause NPS pollution by disrupting the natural hydrology of a water body, increasing impervious surfaces, and contributing to the loss of aquatic habitat. Watershed Assistance Grants address NPS pollution by promoting responsible land use practices on the watershed scale.

increasing impervious surfaces, and contributing to the loss of aquatic habitat. Watershed Assistance Grants address NPS pollution by promoting responsible land use practices on the watershed scale.

The Great Bay watershed has experienced population growth and this increase in development threatens the water quality and health of Great Bay. Impervious cover, landscaping, and altered hydrology, have increased nonpoint source pollution in runoff discharged to Great Bay from developed land. The Exeter-Squamscott River is a major tributary to Great Bay and is the focus of the Water Integration for Squamscott Exeter, (WISE) watershed management plan to develop and implement approaches for controlling nonpoint source pollution. Through WISE, several structural best management practices (BMPs) were identified within the Town of Exeter to control stormwater runoff, decrease nitrogen loading, and reduce flooding. One of these BMPs is a regional stormwater infiltration facility in the area of Winter Street Playground. Two additional BMPs were identified including a media filter at Salem Street and a media filter at Park Street. Collectively, these three BMPs are anticipated to treat stormwater runoff from approximately 13.6 acres and are expected to remove approximately 71 pounds of nitrogen per year, resulting in a 77% load reduction from the contributing drainage area.

The total project costs are budgeted at \$198,206. NHDES will provide \$118,900 (60%) of the project costs through a federal grant, and the Town of Exeter Department of Public Works will provide the remaining costs through cash and in-kind services. A budget is provided in Attachment A.

In the event that federal funds become no longer available, general funds will not be requested to support this program. The agreement has been approved by the Office of the Attorney General as to form, execution, and content.

We respectfully request your approval of this item.

Exhibit A
Scope of Services

The Town of Exeter (Department of Public Works) will perform the following tasks as described in the proposal titled *Squamscott River, Water Integration for Squamscott-Exeter (WISE) Integrated Plan: Subsurface Infiltration and Media Filtration in the Lincoln Street Subwatershed, Exeter, New Hampshire* submitted July 26, 2020:

Objective 1: Complete the design analysis for the Winter Street Playground Regional Infiltration Best Management Practice (BMP).

Measure of Success: Success will be indicated through completion of a design for the Winter Street Playground BMP.

Deliverable 1: Base information for Winter Street Playground BMP is submitted to the New Hampshire Department of Environmental Services (NHDES).

Task 1: Conduct existing conditions survey of the Winter Street project site including storm drain network up-gradient of the proposed BMP site.

Task 2: Develop a draft and final Site Specific Project Plan (SSPP) to document the anticipated pollutant load reduction modeling methodology and quality control procedures; obtain approval for SSPP from NHDES.

Task 3: Incorporate the updated conditions survey into the Winter Street BMP design.

Objective 2: Implement Winter Street Playground BMP and Salem Street/Park Street BMP (note: the Salem Street/Park Street BMPs were designed and bid packages prepared prior to this grant project using Town funds).

Measures of Success: Success will be evaluated based on modelling the as-built condition using the existing land use based pollutant load model developed for the Squamscott-Exeter Study Watershed Based Plan (2015).

Deliverable 2: BMP documentation including bid packages, pollutant load reduction estimates, photos, and operation and maintenance guidelines.

Task 4: Develop one package for construction bidding and conduct construction bidding procurement for Winter Street Playground BMP. Note, the Salem Street/Park Street BMPs were previously designed and bid packages prepared prior to this grant project using Town funds.

Task 5: Install media filter BMPs in Salem St/Park St.

Task 6: Install an infiltration BMP at the Winter Street Playground site. Public education signage will also be installed at the site.

Task 7: Perform modeling of the as-built condition to evaluate success, including pollutant load reduction estimates for installed BMPs, operation and maintenance guidelines, and document in the project completion report.

Objective 3: Prepare and submit payment requests, match documentation, and all required reports to NHDES.

Measures of Success: Timely semi-annual progress reports, pollutants controlled reports, and the final report submitted to NHDES is approved.

Deliverable 3: Semi-annual progress reports, pollutants controlled reports, and final report on file with NHDES.

Task 8: Submit electronic semi-annual reports documenting all work performed during the project periods as follows:

- Work completed April 1 – September 30, report is due by October 31
- Work completed October 1 – March 31, report is due by April 30

The semi-annual reports shall include a Pollutants Controlled Report when structural BMPs have been implemented during the reporting period. In the event that the grantee has not completed a timely submittal of the progress reports, all further payments will be suspended until the overdue reports are submitted, and approved by NHDES.

Task 9: Submit payment requests, procurement, and match documentation to NHDES and conduct management activities as needed to support the project.

Task 10: Submit a comprehensive final report to NHDES on or before the project completion date. The final report shall include load reduction estimates, photo-documentation of installed system components when applicable, and comply with the NHDES and USEPA requirements found in the final report guidance document, including ADA compliance on the NHDES Watershed Assistance Section webpage.

Additional Requirements of the Agreement

Quality Assurance

All project activities which are to be guided by a quality assurance (QA) document such as a Quality Assurance Project Plan (QAPP) or Site Specific Project Plan (SSPP) must not begin prior to NHDES/USEPA approval of that QA document. In the event that sampling, modeling, or other such activities precede QA document approval, the data will not be considered valid, and the grantee will forfeit the ability to receive payment for those activities.

Outreach Materials

All materials produced for public distribution shall be reviewed and approved by NHDES prior to distribution and shall include the NHDES logo and the following citation: "Funding for this project was provided in part by a Watershed Assistance Grant from the NH Department of Environmental Services with Clean Water Act Section 319 funds from the U.S. Environmental Protection Agency". All final work products must meet the applicable Americans with Disabilities Act (ADA) Title II Regulations to the extent practicable and shall be guided by best practices outlined in the Revised Section 508 Standards of the Rehabilitation Act and the Web Content Accessibility Guidelines (WCAG). At minimum, final work products shall include sans-serif fonts, underlined and descriptive text links, color best practices, captions for audio and

video content, headers in tables, images with alt text, gender-neutral text, and consideration of the Plain Writing Act. Examples of final work products and outreach materials include; but are not limited to, project reports, press releases, newsletter articles, websites, videos and signage.

Operations and Maintenance

Management practices implemented as agreed upon in the scope of services of this grant agreement and with grant funds or matching funds under a Section 319 Watershed Grant, shall be properly operated and maintained for the intended purposes during the life span of the project. The life span of a project shall be determined by the Grantee, tailored to the types of practices expected to be funded in this project, and agreed upon by NHDES. The Grantee shall provide NHDES with an engineering estimate of the design life of the best management practice(s) (BMPs), or in the case of small-scale BMPs which do not have a design life estimation completed by an engineer, the design life of that practice shall be estimated to be ten years.

Operation includes the administration, management, and performance of non-maintenance actions needed to keep the completed practice safe and functioning as intended. Maintenance includes work to prevent deterioration of the practice, repairing damage, or replacement of the practice to its original condition if one or more components fail. The Grantee shall assure that any sub-award of Section 319 funds similarly include the same condition in the sub-award. Additionally, both USEPA and NHDES reserve the right to periodically inspect a practice during the life span of the project to ensure that operation and maintenance are occurring. If it is determined that the participants are not operating and maintaining these practices in an appropriate manner, NHDES may request a refund for that practice supported by the grant.

**Exhibit B
Method of Payment and Contract Price**

Documentation of match credit shall be provided with each payment request. The grantee shall submit payment requests, procurement reports, and match documentation on the forms provided by NHDES.
