REQUESTED ACTION

Approve Great Bay Marina's request for a five-year permit time extension of NH Department of Environmental Services (NHDES) Wetland Bureau permit #2019-01758, to perform the following work on Broad Cove-Piscataqua River in Newington, in accordance with RSA 482-A:3, XIV-a. This project was previously approved by the Governor and Executive Council on May 20, 2020, Item #59. No comments were submitted by the Newington Conservation Commission regarding the project as proposed.

Maintenance dredge 600 square feet (300 cubic yards) of accumulated sediments from within the boat launch area and placement of approximately 60 linear feet (340 square feet) of rip-rap for the reconstruction of an existing deteriorated rip rap seawall.

NHDES imposed the following conditions as part of this approval:

1. All work shall be in accordance with plans by Civilworks New England dated May 8, 2019, and revised through September 23, 2019 as received by the NH Department of Environmental Services (NHDES) on October 3, 2019.
2. Not less than 5 state business days prior to starting work authorized by this permit, the permittee shall notify David.Price@des.nh.gov at the NHDES Wetlands Bureau and the Newington Conservation Commission in writing of the date on which work under this permit is expected to start.
3. There shall be no further maintenance dredging of sediment at any tide level, either on or adjacent to the boat ramp, beyond the one occurrence permitted herein.
4. Dredging in tidal waters shall be done between November 15 and March 15, and shall not be permitted during a fish migration or larval setting stage of shellfish.
5. Work shall be done during periods of low tide only.
6. Equipment used for rip-rap placement shall be done from the landward side and no equipment shall be located below highest observable tideline.
7. Any stone used in the construction or repair of a revetment shall be of suitable size and weight to assure that the structure is stable and will withstand tidal river wave energy anticipated at this location.
8. No person undertaking any activity shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards in RSA 485-A and Env-Wq 1700.
9. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and water at the work site has returned to normal clarity.

10. All dredged material shall be placed outside of the areas subject to RSA 482-A.
11. Dredged material to be stockpiled in uplands shall be dewatered in sedimentation basins lined with siltation and erosion controls, and located outside jurisdiction to prevent water quality degradation.
12. Construction equipment shall be inspected daily for leaking fuel, oil, and hydraulic fluid prior to entering surface waters or wetlands or operating in an area where such fluids could reach groundwater, surface waters, or wetlands.
13. The permittee's contractor shall maintain appropriate oil/diesel fuel spill kits on site that are readily accessible at all times during construction, and shall train each operator in the use of the kits.
14. All refueling of equipment shall occur outside of surface waters or wetlands during construction. Machinery shall be staged and refueled in upland areas only.

EXPLANATION

NHDES approved this project on January 15, 2025. NHDES supported its decision with the following findings:

1. Per Rule Env-Wt 314.05(b), the permittee submitted a written request to the department for an extension of permit prior to the expiration of the permit.
2. Per Rule Env-Wt 314.05(d), as specified in RSA 482-A:3, XIV-a(a), the department finds the permittee has submitted the request as specified in Env-Wt 314.05(b) and (c) and the mitigation measures proposed by the permittee are adequate to protect public waters from deterioration.

NHDES Wetlands Bureau permit #2019-01758 application documents are enclosed for review by the Governor and the Executive Council in consideration of this request and in accordance with RSA 482-A:3, II(a), as it is a major project located in New Hampshire public waters.

We respectfully request your approval of this item.

The project proposes to dredge approximately 600 sf of sediment along the docking structure to the east of the site. A turbidity curtain will be installed for sediment and erosion control and a dredging dewatering containment area will be created and used to dewater the material on site. Additionally, approximately 340 sf of rip-rap will be added to an existing structure along the western side of the site to ensure shoreline protection.
