Sheri L. Rockburn
Assistant Commissioner

August 24, 2026

Her Excellency, Governor Kelly A. Ayotte
and the Honorable Council
State House
Concord, New Hampshire 03301

REQUESTED ACTION

Authorize the Department of Administrative Services (DAS), Division of Plant and Property, to make **sole source, retroactive** unencumbered payments to Spears Bros. Building Salvage & Wrecking, Inc., (VC# 400212), Laconia, NH in the total amount of \$358,079.75 for the emergency demolition services at the former Laconia State School effective upon Governor and Council approval. **100% Revolving Funds (DAS Maintenance Fund)**

Funding is available in account, DAS Maintenance Fund, as follows:

	<u>FY2027</u>
01-14-14-141510-70490000-048-500226 – Contractual Maintenance Build-Grounds	\$358,079.75

EXPLANATION

This request is **retroactive** and **sole source** due to the emergency fire that occurred at the former Laconia State School on June 14, 2026. On the night of June 14, 2026, a fire occurred at the former Laconia State School, resulting in the destruction of the three-story Spaulding Building at the center of the property. DAS was on site the following morning and met with the State Fire Marshal's Office and the Laconia Fire Chief. The Fire Chief determined that the building posed an immediate safety hazard and called Spears Bros Building Salvage & Wrecking, Inc. to perform demolition of the remaining unstable bricks to prevent injury or damage. Spears Brothers arrived around 1:00 p.m. that day and completed that initial emergency work for \$3,500.

On Monday, June 15, 2026, DAS received notice from the Department of Environmental Services (DES) that the City of Laconia had issued an Ordered Demolition of the remaining structure and declared the building an imminent hazard requiring immediate removal. DES also advised DAS that under asbestos regulations, the State has 30 days from June 14 to properly dispose of asbestos-containing materials from the site.

In response to the emergency, DAS contacted all four statewide vendors holding Statewide contracts for Asbestos Abatement, Mold Remediation, and Lead Paint Services. Only EnviroVantage visited the site and provided an estimated quote for \$311,773. One vendor stated the project was too large, and two declined to quote. The Laconia Fire Chief recommended Spears Bros based on past municipal use for

demolition and removal of hazardous debris. DAS requested and received an estimated quote from Spears Brothers for \$282,000, representing an original estimated savings of \$29,773.

Given the safety risks, regulatory deadlines, and the need for immediate site clearance DAS requested and received a waiver from DAS Procurement to move forward outside of the statewide contracted vendors. DAS verified that Spears Bros Building Salvage & Wrecking, Inc. is in good standing with the Secretary of State and is an active vendor with the State of New Hampshire.

Spears Bros. retained Accurate Environmental Inc. to perform all asbestos consulting, permitting, sampling, wash-pad setup, and decontamination activities, as documented in the Spaulding Building Asbestos Inspection & Consulting Report (attached). Testing and sampling throughout the project tested negative for asbestos and the final site inspection by the Lawson Group on July 31st confirmed the site was clear of all asbestos-containing materials, passing the final clearance reequipments. The original quote from Spears Bros estimated 500 tons of debris, however the final measured disposal totaled 808.85 tons, resulting in an increase in the final invoice from the original quote. The final invoice from Spears Bros. is \$354,579.75.

DAS is requesting approval to use DAS Maintenance Funds for this payment. The Laconia property is anticipated to be sold this calendar year, and allocating this expense to capital emergency funds would trigger bonding-related compliance requirements associated with the sale of a bonded property.

Based on the foregoing, I am respectfully recommending approval of the **sole source, retroactive** payments to Spears Bros. Building Salvage and Wreckage, Inc.

Respectfully submitted,

Charles M. Arlinghaus
Commissioner

Asbestos Inspection & Consulting Report

Prepared For:

Mr. Daniel R. Brennan
Project Administrator
State of NH
Department of Administrative Services
Division of Plant & Property
19 Pillsbury Street
Concord NH 03301
603-856-5576

Introduction

On June 14, 2026 the Spaulding Building, located at on the grounds of the former State school, Right Way Path, in Laconia New Hampshire was lost due to heavy fire damage. The building was ordered to be demolished by local authorities due to the height and unstableness of what remained. Very little of the interior structure survived the fire, leaving the brick walls unstable.

Previous testing performed in 2020 by RPF Associates should several items tested positive for asbestos. Due to the fire, these items could not be safely abated, and rendered the remaining debris as commingled with asbestos. Therefore, all materials that could not be cleaned will were sent out as bulk asbestos waste.

Spears Bros. Building Wrecking of Laconia New Hampshire was awarded the contract to clean up the fire damaged building. Spears Bros. retained Accurate Environmental Inc as the asbestos consultant and contractor to perform any and all asbestos related actives from permitting, workers, analytical testing, wash pad setup and final decon of the equipment, site and foundation.

Summary of Work

Once the site was secured and erosion control methods were in place, an exclusion zone was setup and all debris outside the foundation was scooped and put within the foundation walls. Then, on three sides of the foundation, approximately 3"-4" of soil was excavated and placed inside the foundation with the building debris. The excavator worked it's way back to the non cleaned/non-excavated material as to not containment any more soil than necessary. During this time, properly licensed asbestos workers were onsite to collect any fine debris the excavator missed, construct a wash pad/ load out area and then decon the machine.

In the first day of work, Spears Bros. retained The Lawson Group as a third party independent contractor to perform air sampling to prove their dust control methods were adequately working . A total of 5 air pumps were set up and samples were done with an ASAP turn around time. All samples showed zero dust particles. It was determined the amount of water and their means/ methods were acceptable.

After the initial 3"-4" of soil was removed, soil samples were collected and sent out for an ASAP turnaround in order to determine if the area/side was clear.

Over the course of the next few weeks the debris pile was tossed and gone through to pull out any materials that could be cleaned and sent for recycling. This was done simultaneously as the debris was moved to the load out area and put in trucks for a final disposal location of Minerva Enterprises LLC in Waynesburg Ohio.

Once approximately half of the foundation walls and floor was exposed, samples of the plaster and sheetrock were collected to determine if any asbestos was present all samples were negative for the presence of asbestos. The area was bulk cleaned until all of the debris was removed.

Once all of the debris was removed, walls & floor was final scraped of any plasters, flooring etc, power washed and water collected and filtered. A final visual inspection was performed by The Lawson Group. Upon passing of a visual inspection the area was broke down and deemed cleared for normal activities. The foundations were then removed and crushed to avoid any sudden drop offs.

3 additional soil samples were collected from the most heavily used area and all 3 samples were negative for the presence of asbestos.

Summary

Approximately 808 tons of building debris and soil were removed from the site and 16 tons of metal were sent out for recycling.

Attached you will find copies of all air testing, soil and bulk sample results, visual inspection report and disposal slips.

Spaulding Building,
Laconia, NH

Method: PLM Soil, EPA 600/R-93/116

Dear Deven Spears,

Asbestos Identification Laboratory has completed the analysis of the samples from your office for the above referenced project. The Analysis Method is PLM Soil. The information and analysis contained in this report have been generated using the EPA 600/R-93/116 Method for the Determination of Asbestos in Bulk Building Materials. Materials or products that contain more than 1% of any kind or combination of asbestos are considered as asbestos containing building material as determined by the EPA. This Polarized Light Microscope (PLM) technique may be performed either by visual estimation or point counting. Point counting provides a determination of the area percentage of asbestos in a sample. If the asbestos is estimated to be less than 10% by visual estimation of friable material, the determination may be repeated using the point counting technique. The report may not be used by the customer to claim product endorsement by NVLAP or any other U.S. Government Agency.

The EPA recommends you should assume vermiculite contains asbestos and not to disturb it. Airborne asbestos fibers present a health risk through inhalation, so the first step is to not disturb the material, which could release fibers into the air. If you disturb the insulation, you may inhale some asbestos fibers. The degree of health risk depends on how much and how often this occurred. If you choose to remove the vermiculite insulation, this work should be done by a trained and accredited asbestos abatement contractor that is separate and independent from the company that performed the assessment of the vermiculite insulation to avoid any conflict of interest. <https://www.epa.gov/asbestos/my-attic-has-vermiculite-insulation-it-am-i-risk-should-i-take-it-out> | US EPA.

Laboratory results represent the analysis of samples as submitted by the customer. Information regarding sample location, description, area, volume, etc., was provided by the customer. Information provided by the customer can affect the validity of results. Asbestos Identification Laboratory is not responsible for sample collection activities or analytical method limitations. Unless notified in writing to return samples, Asbestos Identification Laboratory discards customer samples after 30 days. Samples containing subsamples or layers will be analyzed separately when applicable. Reports are kept at Asbestos Identification Laboratory for three years. All customer information will be maintained in confidentiality. This report shall not be reproduced, except in full, without the written consent of Asbestos Identification Laboratory.

Re: Dust Monitoring and Visual Inspection- Right Way Path-Former
Spaulding Building Laconia, New Hampshire.
TLG File Number 26-21376

Dear Deven:

The Lawson Group (TLG) was on site at the Former Spaulding Building located at Right Way Path, in Laconia, New Hampshire on July 14, 2026, to perform area dust monitoring and again on July 31, 2026 for a visual inspection of building materials that were found to contain asbestos. This building had a fire, and the entire building went out as asbestos in lined trucks. TLG found no Asbestos Containing Materials (ACM) remaining on the ground below. According to information provided to TLG, the building had door caulking, plaster walls and ceilings, laminate countertop, and flange gasket insulation.

Also, all dust samples came back within the regulatory limits on the day we did area dust samples. Dust Results are included within this report.

The visual inspection was performed in accordance with applicable American Society for Testing and Materials protocol (ASTM E 1268 90.9.4).

No air sampling was conducted as part of the asbestos visual inspection.

Analytical Disclaimers

- Unless otherwise noted within the report, all quality control results associated with the samples were within established control limits or did not impact reported results.
- Note: The findings recorded within this report were drawn from analysis of the sample(s) provided to the laboratory by the Client (or a third party acting at the Client's direction). The laboratory does not have control over the sampling process, including but not limited to the use of field equipment and collection media, as well as the sampling duration, collection volume or any other collection parameter used by the Client. The findings herein constitute no warranty of the sample's representativeness of any sampled environment, and strictly relate to the samples as they were presented to the laboratory. For recommended sampling collection parameters, please refer to the Sampling and Analysis Guide at <https://env.sgs.com/services/industrial-hygiene/sampling-analysis-guide/>.
- Unrounded results are carried through the calculations that yield the final result and the final result is rounded to the number of significant figures appropriate to the accuracy of the analytical method. Please note that results appearing in the columns preceding the final result column may have been rounded and therefore, if carried through the calculations, may not yield an identical final result to the one reported.
- The stated LOQs for each analyte represent the demonstrated LOQ concentrations prior to correction for desorption efficiency (if applicable).
- Unless otherwise noted within the report, results have not been blank corrected for any field blank or method blank data.

Accreditations SGS Galson holds a variety of accreditations and recognitions. Our quality management system conforms with the requirements of ISO/IEC 17025. Where applicable, samples may also be analyzed in accordance with the requirements of ELAP, NELAC, or LELAP under one of the state accrediting bodies listed below. Current Scopes of Accreditation can be viewed at <https://env.sgs.com/company/certifications-and-accreditations/>. To determine if the analyte tested falls under our scope of accreditation, please visit our website or call Client Services at (888) 432-5227.

Subject: Approval of Certification for Asbestos Abatement Supervisor: AS103047

Dear Deven W Spears:

The New Hampshire Department of Environmental Services, Air Resources Division, (NHDES) has approved your application for certification as an asbestos abatement supervisor in accordance with Env-A 1800, *Asbestos Management and Control*.

- This certification allows you to perform minor asbestos abatement projects as defined by Env-A 1802.37. This certification also allows you to supervise and perform major asbestos abatement projects as defined by Env-A 1802.35, provided a New Hampshire licensed asbestos abatement contractor is also engaged in the major asbestos abatement project.
- Your certification expires on 2/4/2027.
- If you want to renew your certification, you are responsible for filing a timely and complete renewal application in accordance with Env-A 1816.02. NHDES recommends you submit a renewal application at least 30 days prior to expiration of the certification.
- You are responsible for adhering to all local, state, and federal regulations, and obtaining any necessary approvals prior to start of the work.

If you have any questions, please contact Alexandra Wheeler, NHDES Licensing and Certification Specialist, at 603-271-4609 or asbestos.licensing@des.nh.gov.

You must have the attached certification present at asbestos abatement project worksites at all times.

*Card Instructions: Fold and tear card along perforated edge. Use scissors to cut side of card. Lamination is recommended.

Subject: Approval of Certification for Asbestos Abatement Worker: AW102474

Dear Deven W Spears:

The New Hampshire Department of Environmental Services, Air Resources Division, (NHDES) has approved your application for certification as an asbestos abatement worker in accordance with Env-A 1800, *Asbestos Management and Control*.

- This certification allows you to perform minor asbestos abatement projects as defined by Env-A 1802.37. It also allows you to perform major asbestos abatement projects as defined by Env-A 1802.35, provided a New Hampshire certified asbestos abatement supervisor is at the worksite supervising the abatement project, and the supervisor is working under the direction of a New Hampshire licensed asbestos abatement contractor.
- Your certification expires on 2/4/2027.
- If you want to renew your certification, you are responsible for filing a timely and complete renewal application in accordance with Env-A 1816.03. NHDES recommends you submit a renewal application at least 30 days prior to expiration of the certification.
- You are responsible for adhering to all local, state, and federal regulations, and obtaining any necessary approvals prior to start of the work.

If you have any questions, please contact Alexandra Wheeler, NHDES Licensing and Certification Specialist, at 603-271-4609 or asbestos.licensing@des.nh.gov.

You must have the attached certification present at asbestos abatement project worksites at all times.

Project Information
26-178

Spaulding Bldg, Laconia

Method: PLM Soil, EPA 600/R-93/116

Dear Deven Spears,

Asbestos Identification Laboratory has completed the analysis of the samples from your office for the above referenced project. The Analysis Method is PLM Soil. The information and analysis contained in this report have been generated using the EPA 600/R-93/116 Method for the Determination of Asbestos in Bulk Building Materials. Materials or products that contain more than 1% of any kind or combination of asbestos are considered as asbestos containing building material as determined by the EPA. This Polarized Light Microscope (PLM) technique may be performed either by visual estimation or point counting. Point counting provides a determination of the area percentage of asbestos in a sample. If the asbestos is estimated to be less than 10% by visual estimation of friable material, the determination may be repeated using the point counting technique. The report may not be used by the customer to claim product endorsement by NVLAP or any other U.S. Government Agency.

The EPA recommends you should assume vermiculite contains asbestos and not to disturb it. Airborne asbestos fibers present a health risk through inhalation, so the first step is to not disturb the material, which could release fibers into the air. If you disturb the insulation, you may inhale some asbestos fibers. The degree of health risk depends on how much and how often this occurred. If you choose to remove the vermiculite insulation, this work should be done by a trained and accredited asbestos abatement contractor that is separate and independent from the company that performed the assessment of the vermiculite insulation to avoid any conflict of interest. <https://www.epa.gov/asbestos/my-attic-has-vermiculite-insulation-it-am-i-risk-should-i-take-it-out> | US EPA.

Laboratory results represent the analysis of samples as submitted by the customer. Information regarding sample location, description, area, volume, etc., was provided by the customer. Information provided by the customer can affect the validity of results. Asbestos Identification Laboratory is not responsible for sample collection activities or analytical method limitations. Unless notified in writing to return samples, Asbestos Identification Laboratory discards customer samples after 30 days. Samples containing subsamples or layers will be analyzed separately when applicable. Reports are kept at Asbestos Identification Laboratory for three years. All customer information will be maintained in confidentiality. This report shall not be reproduced, except in full, without the written consent of Asbestos Identification Laboratory.
